| 3 | 1 | - | 7 | 4 | 30 | 60 | 10 | - | - | 100 |
| Unit I 12 hrs | | | | | | | | | | |
| Introduction: Concept of infrastructure; Need for infrastructure planning and engineering; Infrastructure development scenario in India; Scope for infrastructure management. | | | | | | | | | | |
| Overview of Indian Infrastructure Assets: Urban infrastructure, Water, Dams, Bridges, Canals, Housing, Roads, Railways, Ports, Airports, Energy , Power | | | | | | | | | | |
| Unit II 10 hrs | | | | | | | | | | |
| Infrastructure Performance: Assessment of infrastructure development related to civil engineering; Report card inspection; Energy Infrastructure: Components of energy; Power generation; Transmission; Distribution; Oil & gas; Coal; Renewable energy sources | | | | | | | | | | |
| Unit III 10 hrs | | | | | | | | | | |
| Infrastructure Interdependencies: Sustainable Infrastructure; Privatization of Infrastructure: Infrastructure laws Cost Estimation for Designing & Maintaining Infrastructure: Financing of infrastructure projects; Case Study of Infrastructure planning & engineering of metro rail constructions. | | | | | | | | | | |
| Unit IV 12 hrs | | | | | | | | | | |
| Rural Infrastructure: Alternate construction materials; Rural housing technologies; Rural roads; Rural water supply and sanitation | | | | | | | | | | |
| Case Studies/Readings: Faculty will select 2-3 cases on infrastructure planning and engineering for reading and discussion among students | | | | | | | | | | |
| Reference Books: | | | | | | | | | | |

| 3) Alagiri D (2007) Infrastructure Development, ICFAI University Press Hyderabad | | | | | | | | | | |

| E512T Project Management | | | | | | | | | | |
|--------------------------|---|---|---|----------|-----------------------------------|----|----|-----------|---------|-------------|
| Teaching Scheme | | | | | Examination Scheme (audit course) | | | | | |
| L | T | P | C | Hrs/Week | Theory | | | Practical | | Total Marks |
| | | | | | MS | ES | IA | LW | LE/Viva | |
| 3 | - | - | 6 | 3 | 30 | 60 | 10 | - | - | 100 |

Unit I 10 hrs

Introduction: Definition & scope of project; Parameters affecting a project; Project planning & implementation cycle; Definition, concept & scope of project management; Role of project manager; Enhancing the probability of success of a project; Phases of a project – Identification, feasibility, execution, completion & commissioning; Project life cycle.

Project Organization: Factors responsible for organizational revolution; Formal & informal organization structures; Requirements of a project organization; Matrix organization structure; Selecting a project organization structure; Criteria to help determine a suitable organizational form in a given project environment.

Unit II 10 hrs

Project Scheduling & Planning: Scheduling principles; Bar charts (Gantt charts); Milestones charts; S-curve, Critical path method: Arrow diagram; Network logic diagram; Time estimates; Slack; Total, free & independent floats; Case studies. PERT (Project evaluation & review techniques): Three time estimates (optimistic, most likely, pessimistic); Beta distribution; Expected time; Variance in project duration; Standardized normal variable; Case studies. Network scheduling with limited resources: Resource allocation; Resource leveling; Case studies; Updating the network. Working of MS Project

Work Break Down Structure (WBS): Role of project manager in developing WBS; Rules facilitating the preparation of WBS; Typical hierarchy in the WBS of a project; Desirable characteristics of work packages; Determinants having critical influence on the work packages; Project oriented WBS; Functionally oriented WBS; Integration of WBS & organization structure.

Unit III 08 hrs

Project Appraisal: Basics of economic decision; Cash flows; Rate of return; Economic evaluation of project proposals using ROR; Economic appraisal criteria for selection of industrial projects; Shadow process; Measurement of comparative advantages; Limitation of commercial profitability; Profit maximization & efficiency; Infrastructure financing – issues, developments & prospects; Ownership structures – BOT, BOOT, BOO, BOLT.

Project Control: Concept; Control cycle; Basic controlling parameters; Line of Balance; Role of project management on control cycle; Basic planning & developing a classification system for controlling. Time control: Measures to be taken by project manager for time control. Cost control: Strategic planning & cost programming; Potentiality of cost reduction during different phases of a project; Cost planning; Control curves; Cash flow; Time cost trade-off planning for minimum costs; Cost slope concept; Crash point; Normal point; Total project cost; Controlling cost overrun & time overrun. Quality control: Need of QA/QC programs; Objectives of QA/QC; Quality assurance techniques.

Unit IV 12 hrs

Project Monitoring: Measurement of performance; Reporting of performance; Corrective measures for unfavourable variations; Major functions of monitoring; Influence of decision making authority in project monitoring

Project Risk Management: Risk identification: Risk analysis; Risk response planning & mitigation measures; Case studies.

Latest Trends in Project Management: Integrated project delivery (IPD); Lean integrated project delivery (LIPD); Critical chain project management (CCPM)

Software Applications in Project Management: Working with MS Project

In this exercise students will work in small groups and undertake studies on urban water supply, urban wastewater and surface drainage planning, design and evaluation for a city or part of a city. The project design studio carries out two exercises viz. Perception studies and Area planning project. This aims to make student aware on infrastructure requirements and standards required for city level planning.

Unit I

26 hrs

Perception Studies: To carry-out quick perception study on buildings plan and building layout, road network and hierarchy, open spaces and plazas, urban infrastructure related to drinking water supply, wastewater generated, and storm water drainage. Students will prepare a small note, situation notes and sketches, photographs, drawings and flow charts based on analysis. This exercise will equip them better understanding and analyzing various design issues for next stage of project work.

Unit II

52 hrs

Area Planning Project: Area planning project is designed to make student get in-depth knowledge on physical infrastructure for water supply, wastewater and stormwater for an area such as part of city or integrated townships or special economic zones or special investment regions (say around 200 ha). The area planning project demonstrates, how urban infrastructure plan are prepared? What are design standards for basic service provisions for Indian cities? How to insure equitable distribution, and how to create a synergy between resources availability and resources use? Finally, using modern software tools such as WaterCAD, SewerCAD and StormCAD the infrastructure plan for selected area to be prepared. In addition strategies for financial resources also need to be worked out.

Environmental Impact Assessment : Studio work need to be carried out to give exposure about the methodology to develop Environmental Impact Assessment (EIA) reports for infrastructure projects. Also exposure need to be given for prediction and assessment of impacts on the air environment, surface water environment, soil and ground water environment; Environmental management systems –ISO 14000, Audit procedures, Certification.

The final plan will include components such as detailed objectives, population density, distribution of open spaces, development and control regulation, water supply & distribution plan, environmental impact assessment report, design standards, infrastructure plan, preliminary costing and financing strategy.

| 3 | - | - | 6 | 3 | 30 | 60 | 10 | - | - | 100 |

Unit I

10 hrs

Introduction: Definition, Applications of GIS, History of GIS, Maps and spatial information, Computer assisted mapping and map analysis, Spatial data representation, data and coverage, Thematic characteristics of spatial data, Functions of GIS, Decision support tools for engineers Spatial and Attribute Data Modelling: Sources of spatial data- census, survey data, air photos, satellite images, field survey; Data formats- raster and vector data, Data structures, Retrieval and reclassification of data, Comparison of Vector and Raster Methods, Acquisition of spatial data for terrain modeling, Digital terrain modeling, Modeling network, Problem of data management, Database management system, Relational database model, Spatial and attribute data, GIS database applications and development

Unit II

12 hrs

Data Input, Editing and Integration: Manual scanning and digitising, Automatic digitizing methods, Data editing, Correcting errors in attributes and spatial data, Integration of GIS database with remote sensing and GPS, GIS Data Analysis: Measurement of distances, perimeter and area; map scale and mapping principles, Buffering and neighborhood functions, Raster and Vector overlay method: point-in-polygon, line-in-polygon and polygon-on-polygon – problems, Spatial interpolation, GIS for Surface Analysis, Network analysis: shortest path problem, travelling problem, location allocation of resources, route tracing, operational aspects of GIS

Unit III

10 hrs

GIS Modeling for Decision Support: Models of spatial processes, Natural and scale analogue models, Conceptual models, Mathematical model, Models of physical and environmental processes, Modeling human process, Gravity model, Problems related to using GIS to model spatial processes; Maps as output, Alternative cartographic and non-cartographic outputs, Spatial multimedia, GIS and spatial decision supports, Maps as decision tool

Unit IV

07 hrs

Global Positioning System: Definition, Basics of GPS, Functional segments, Computation of 3D location, Accuracy in measurements, Errors and rectification of errors, Applications of GPS in Infrastructure Case Studies: GIS applications in urban system, transportation planning and highway engineering, water resources and environmental engineering

CE514T Elective-I* Water and Wastewater Treatment

| Teaching Scheme | | | | | Examination Scheme (audit course) | | | | | |
|-----------------|---|---|---|----------|-----------------------------------|----|----|-----------|---------|-------------|
| L | T | P | C | Hrs/Week | Theory | | | Practical | | Total Marks |
| | | | | | MS | ES | IA | LW | LE/Viva | |
| 3 | - | - | 6 | 3 | 30 | 60 | 10 | - | - | 100 |

Unit I 12 hrs

Introduction: Water Quality- Physical, chemical and biological parameters of water, Standards on water quality, Water quality indices, Water purification systems in natural systems, River bank filtration, Physical and Chemical processes of water treatment

Unit II 12 hrs

Wastewater Treatment: Biological processes, Activated sludge process and its modification, Biological Nitrification and de-nitrification, attached growth biological treatment systems, sludge and effluent disposed, Primary, Secondary and Tertiary treatment

Unit III 09 hrs

Advanced Treatment: Unit operations, unit processes. Aeration and gas transfer, Sedimentation, Filtration, Adsorption, Disinfection

Unit IV 06 Hrs

Case Studies of typical Water Treatment Plants and Waste Water Treatment Plants

| CE514T Elective-I* Soildwaste and Hazardous Waste Management | | | | | | | | | | |
|--|---|---|---|----------|-----------------------------------|----|----|-----------|---------|-------------|
| Teaching Scheme | | | | | Examination Scheme (audit course) | | | | | |
| L | T | P | C | Hrs/Week | Theory | | | Practical | | Total Marks |
| | | | | | MS | ES | IA | LW | LE/Viva | |
| 3 | - | - | 6 | 3 | 30 | 60 | 10 | - | - | 100 |
| Unit I 09 hrs | | | | | | | | | | |
| Introduction: Solid waste, Sources of wastes, classification, Characterization, Composition and Properties of solid Wastes; Hazardous waste, properties & classification of hazardous waste, legal frame work, Waste manifest system | | | | | | | | | | |
| Unit II 10 hrs | | | | | | | | | | |
| Generation, Collection and Transportation of Waste: Generation, Methods to estimate waste quantities, Waste handling, Separation, Storage and Processing at source, Material recovery facility collection rate Collection system, Equipments used, manpower requirement, collection routes optimization, Transfer station, Method and means of transportation, Transportation of Hazardous waste and handling | | | | | | | | | | |
| Unit III 10 hrs | | | | | | | | | | |
| Processing and Recycling: Unit operations for separation and processing, size reduction, separation, density separation, biological processing- composting, bio-methanation, Incineration-process, heat recovery, incineration products, other methods of processing – combustion, pyrolysis, gasification, energy recovery system. Types of incinerators- Liquid injection, Rotary kiln and fluid bed, Multiple-Hearth furnaces, fluidized and catalytic incinerators. Hazardous waste treatment, physicochemical process-Air stripping, stream stripping, Chemical oxidation, Supercritical fluids, Biological methods-Exsitu and Insitu Treatment | | | | | | | | | | |
| Disposal: Methods, Landfills- types, design of landfills, operation of landfills Generation, movement, control and treatment of landfill gases and leachates, standards for leachate disposal, landfill emissions ,closure of landfill, monitoring of landfill. Land fill disposal for hazardous waste | | | | | | | | | | |
| Unit IV 10 hrs | | | | | | | | | | |
| Sitting of wastes management facilities: Sitting guidelines, Planning and developing a site for solid waste management. Site Remediation - site assessment and inspection, the hazardous system and the national priority list. Remedial Actions Handling and treatment of Radio Active Wastes | | | | | | | | | | |
| Reference Books: | | | | | | | | | | |

|--|---|---|---|----------|-----------------------------------|----|----|-----------|---------|-------------|
| Teaching Scheme | | | | | Examination Scheme (audit course) | | | | | |
| L | T | P | C | Hrs/Week | Theory | | | Practical | | Total Marks |
| | | | | | MS | ES | IA | LW | LE/Viva | |
| 3 | - | - | 6 | 3 | 30 | 60 | 10 | - | - | 100 |
| Unit I | | | | | | | | | | 09 hrs |
| Introduction: Scope of transportation and impact on society; System planning process and problem solving process; transportation problems | | | | | | | | | | |
| Unit II | | | | | | | | | | 10 hrs |
| Transportation Technologies: Transportation technologies, suitability and adaptability, Transportation system components; Transportation system characteristics – technological and operational; Technologies for surface, below surface and above surface transportation and their combinations, suitability of such systems in urban and rural areas | | | | | | | | | | |
| Unit III | | | | | | | | | | 10 hrs |
| Analysis of Systems: Generation of alternatives; Performance evaluation of system and performance functions; Operational planning and analysis of components; Travel in space and time; Planning for non-motorized transportation; Freight transportation planning–models and methods; Residential location choice models, Car-ownership models; transportation software | | | | | | | | | | |
| Unit IV | | | | | | | | | | 10 hrs |
| Transportation Economics: Transportation demand and supply; Equilibrium between supply and demand, transportation system equilibrium; Elasticity – direct and cross; concept of consumer surplus; transport demand models – sketch planning, incremental demand model, model estimation from traffic counts; transportation cost, travel – market equilibrium | | | | | | | | | | |
| Sustainable Transportation Planning: Sustainable transportation–issues and principles; non-motorized transportation planning; Impact evaluation and impact models | | | | | | | | | | |

| Unit II | | | | | | | | | | 10 hrs | |
| Contaminants of Solid Waste in Land-fills: Waste contaminants, landfills, types, shape and size of land fills, Liner and liner system, Cover and cover system, Stability of land fills; Land-fill construction & operation, sustainable waste management | | | | | | | | | | | |
| Unit III | | | | | | | | | | 10 hrs | |
| Contaminants of Slurry wastes: Slurry transported wastes, slurry ponds, operation, Embankment construction and raising, Design aspects, Environmental Impact and control | | | | | | | | | | | |
| Unit IV | | | | | | | | | | 10 hrs | |
| Vertical Barriers for Contaminant: Contaminated sites, Types of barriers, Soil-Bentonite slurry trench walls, Cement-Bentonite slurry trench walls, construction, material and design aspects | | | | | | | | | | | |
| Geotechnical Reuse of Waste materials: Waste reduction, use in geotechnical construction, waste characteristics, transportation consideration, Engineering properties of Wastes, Waste material in Embankment and Fills. | | | | | | | | | | | |

| 3 | - | - | 6 | 3 | 30 | 60 | 10 | - | - | 100 |
| Unit I 09 hrs Introduction: Classification of construction, construction and safety, safety scope and benefits, personal protective equipments (PPE) | | | | | | | | | | |
| Unit II 10 hrs Construction Accidents: Injury and Accidents, Definitions, Unsafe act –Unsafe condition, Causes, Investigations and Prevention of accidents, Hazards, Type of construction hazards, Nature, Causes and control measures, Hazard identifications and control techniques, HAZOP , FMEA, FMECA; Cost of construction injuries, Legal implications | | | | | | | | | | |
| Unit III 10 hrs Safety Programmes: Introduction to the Concept of Safety, Need- Safety provisions on construction site, validity of Factory Act, Laws related to the Industrial Safety, Measurement of safety performance Safety Audit: Problem areas in construction safety, Elements of an effective and safety program, Job site safety assessment, Safety meetings, Safety Incentives | | | | | | | | | | |
| Unit IV 10 hrs Safety Organization: Safety policy, Safety record keeping, Safety Culture, Safe Workers, Safety and First line supervisors, Safety and middle managers, Top management practices, Company activities and safety, Safety personnel-Sub contractual obligation, Project coordination and safety procedures | | | | | | | | | | |
| Reference Books: <ol style="list-style-type: none"> 1. Jimmy WHinze (1997) Construction Safety, Prentice Hall Inc. New Jersey 2. Richard J. Coble, Jimmie Hinze & Theo C. Haupt (2001) Construction Safety and Health Management, Prentice Hall Inc. New Jersey 3. Kwaku A Tenah and Jose M Guevera (1995) Fundamental of Construction Management and Organization, Prentice Hall of India New Delhi | | | | | | | | | | |

Unit-I

12 hrs

Concept of Error in Computation; Interpolation: Introduction of Finite differences, Operators, Newton Gregory Forward Interpolation Formula, Newton Gregory Backward Interpolation Formula, Gauss's Forward and Backward Interpolation Formula, Stirling's Central Difference Formula, Lagrange's Interpolation Formula for unevenly spaced data, Inverse Interpolation, Divided Differences, Properties of Divided Differences, Newton's Divided Difference Formula, Relation between Divided Differences and Ordinary Differences; Splines, Cubic Splines, Formulae for Derivatives, Newton-Cotes's Quadrature Formula, Trapezoidal rule, Simpson's one-third rule, Simpson's Three-Eighth rule, Weddle's rule, Romberg's method, Double Integration.

Unit-II

09 hrs

Concept of Rate of Convergence; Numerical solution of Algebraic & Transcendental Equations: Introduction, Descartes's Sign rule, Newton-Raphson method, its applications, Solution of non linear simultaneous equations, Newton-Raphson method for multiple roots, Horner's method, Lin-Bairstow's method or Method for Complex Root, Graeffe's root squaring method, Comparison of various methods.

Unit-III

09 hrs

Numerical Solution of Ordinary and Partial Differential Equations: Picard's method, Taylor's method, Euler's method, Runge – Kutta method, Modified Euler's method, Predictor Corrector methods: Adam's method, Milne's method. Difference Quotients, Graphical representation, Classification of PDE's of 2nd order, Elliptic equations, Solutions of Laplace equation by Liebmann's, iteration method, Poisson's equation, Parabolic equation (One dimension heat equation), Bender-Schmidt method, Crank- Nicholson method.

Unit-IV

09 hrs

Curve Fitting: Principle of Least Squares, Fitting a Straight line and other Curves for a given set of data points . Solution of Simultaneous Algebraic Equations: Direct methods, Iterative methods: Gauss-Jacobi's method, Gauss-Seidal method, Relaxation method.

The Finite Element Method: Introduction, Method of Approximation, The Rayleigh-Ritz Method, The Galerkin Method, Application to One dimensional and two dimensional problems.

Approx 39 hrs Lecture

Reference Books:

1. Introductory Methods for Numerical Analysis by S.S. Sastry, Fourth edition, Prentice Hall of India (2009)
2. Numerical Methods in Engineering and Science with Programs in C & C++ by B.S. Grewal, Khanna Publisher (2010)
3. Numerical Methods for Scientific and Engineering Computation by M.K. Jain, S.R.K. Iyenger and R.K. Jain, 5th edition, New Age International (2007)
4. S.D. Conte & C. de Boor: Elementary Numerical Analysis - an algorithmic approach, Mc Graw Hill, 1980, 3rd Ed., New York.

5. Advanced Engineering Mathematics by R.K. Jain & S.R.K. Iyenger, 3rd edition, Narosa (2002).
6. Advanced Engineering Mathematics by E. Kreyszig, 9th edition John Wiley & Sons (2005)
7. Numerical Methods by E. Balaguruswamy
8. Numerical Methods for Mathematics, Science & Engineering by John H. Mathews
9. Applied Numerical Analysis by Curtis F Gerald & Patrick O. Wheatley
10. Numerical Methods for Engineers, Steven C. Chapra and Raymond P. Canale, Tata McGraw-Hill Publishing Company
